

HOW TO PREVENT FORKLIFT ACCIDENTS

Workplace accidents can result in pain and loss of livelihood for an employee, and legal problems for an employer. Forklift accidents are no exception and therefore prevention is paramount to meet your duty of care.

Businesses that have previously breached workplace health, safety and welfare regulations have been faced with fines of up to ₹60 Lakhs and court costs of around ₹2 Crores!

HOW CAN ACCIDENTS BE PREVENTED?

1. GET THE RIGHT TRAINING

Every forklift is different. Therefore, specialist training is legally required to handle the specific piece of equipment in use, and regular refresher courses are also advised.

2. GET SERVICED REGULARLY

Keeping equipment in good working order through regular visual checks, servicing and maintenance is a simple way to avoid these faults causing accidents.

Call Revival Engineers team.

3. GET THE RIGHT EQUIPMENT

Choosing the wrong equipment for a project may result in hazardous execution and ultimately, a shoddy job.

4. ENFORCE GOOD WORKPLACE PRACTICES

Behavioural factors have a large impact on workplace safety, and unsafe behaviours such as speeding, improper handling of vehicles, or horseplay should be avoided at all costs.

5. INVEST IN SAFETY PRODUCTS

Investing in a few key safety products will avoid danger in the long run!

Revival Engineers are industry leaders in forklift truck and material handling solutions.

We have over 40 years experience and during this time we have developed our skills and knowledge so that we can offer the highest quality sales product and forklift services to our consistently satisfied customers.
